Instructions

You can play this tune in four different ways. If you want to play the advanced tune, follow the tablature (TAB)- that's the numbers on the six lines (numbers are the frets and the lines are the guitar strings). If you want to play the medium version, play all the notes that are written in my simple note code above the tablature - e.g. 0e = open high pitched e string, 5e = 5th fret of the high pitched e string, 7B = 7th fret of the B string etc.

These notes are played every three beats.

If you want to play the easy version follow the simple note code but only play the notes that are encircled e.g. 0e

These notes are played every six beats

For the very easy version simply strum an easy Em chord where you see it written. Play the G,B and e strings "open" at the same time.
